

Transportation Engineer

Job Description:

IBI Group is currently seeking a full-time Transportation Engineer. The successful candidate will become part of a highly skilled international transportation planning team and will be based in Athens, Greece with frequent travel to Moscow in the Russian Federation.

Education:

- University Degree in Civil (with major in Transportation) Engineering from a leading academic institution.
- Postgraduate studies in transportation engineering will be considered as a plus.

Experience:

- Minimum 3 years of experience in transportation planning including:
 - The development of multimodal transportation models for urban networks (preferably in VISUM).
 - Experience in public transport and/or master planning studies for large cities/urban agglomerations.
- Previous experience in the Russian Federation will be considered as a plus.

Duties/Responsibilities/Skills:

- The duties of the successful candidate include:
 - The assessment of existing city transportation models and the development of revised/new models based on various sources of data.
 - Development of scenarios and their respective models.
 - Insightful data analytics and synthesis of information from large data sets into comprehensive visual material.
 - Writing and compilation of project deliverables including reports, memos and presentations.
 - Development of model manuals and training of client personnel.
 - Participation in project meetings as required.
- The successful candidate will be reporting to the Project Manager.
- The following skills are required:
 - Excellent data analysis and synthesis capabilities. Ability to handle large data sets and incomplete information.
 - A self-starter. The successful candidate will have the ability to work remotely from the rest of the team with no direct supervision for extended timeframes.
 - Client facing and presentation skills.
 - Excellent knowledge of the English language.
 - Knowledge of the Russian language.
